

Installation:

```
sudo apt install docker.io -y
```

ASSIGNMENT 1

```
2 sudo apt update
3 sudo apt-get install docker.io -y
4 docker --version
5 sudo docker pull ubuntu
6 sudo docker images
7 sudo docker run -itd -p 80:80 ubuntu
8 sudo docker ps
9 sudo docker exec -it 19e4fff26e2a bash
```

Inside the container

```
1 apt-get update
2 apt-get install apache2 -y
3 service apache2 status
4 service apache2 start
5 service apache2 status
```

ASSIGNMENT 2

```
11 sudo docker images
12 sudo docker ps
13 sudo docker commit 19e4fff26e2a image1
14 sudo docker images
15 sudo docker run -itd -p 81:80 --name c1 image1
16 sudo docker exec -it c1 bash
```

Inside the container

```
8 apt-get update
9 service apache2 status
10 service apache2 start
11 service apache2 status
```

Assignment: 3

<Image name> <dockerhub username> /<image name> (How to tag an image)

```
18 sudo docker images
19 sudo docker tag image1 <dockerhub user name>/image1
20 sudo docker images
21 sudo docker login
22 sudo docker push <dockerhub username>/image1
```

Go to AWS again and Create a new instance (i.e Docker 2):

```
1 sudo apt update
2 sudo apt-get install docker.io -y
3 sudo docker login
4 sudo docker pull <dockerhub user name>/image1
5 sudo docker images
6 sudo docker run -itd -p 80:80 --name newc1 kiara123/image1
7 sudo docker ps
8 sudo docker exec -it newc1 bash
```

Inside the container

```
apt-get update
9 service apache2 status
10 service apache2 start
11 service apache2 status
```

ASSIGNMENT 4

```
sudo nano Dockerfile  
(Inside editor)
```

```
FROM ubuntu  
RUN apt-get update  
RUN apt-get install apache2 -y  
ENTRYPOINT apache2l -D FOREGROUND
```

```
25 sudo docker build . -t image2  
26 sudo docker images  
27 sudo docker run -itd -p 82:80 --name c4 image2  
28 sudo docker ps -a  
29 sudo docker exec -it a4 bash  
30 service apache2 status
```

ASSIGNMENT -5

```
33 sudo nano index.html  
34 sudo nano Dockerfile
```

```
FROM ubuntu  
RUN apt-get update  
RUN apt-get install apache2 -y  
ADD . /var/www/html  
ENTRYPOINT apache2l -D FOREGROUND
```

```
35 sudo docker build . -t image3  
36 sudo docker run -itd -p 83:80 image3  
37 sudo docker exec -it  
4878e5a6156e344df48aaaa7b59b31614dbbb8726d8a85b323a346c33fb8  
cf56 bash
```

38. service apache2 status
